SKORD LABS — FOUNDED 2024

Big ideas, turned into software that works

We are a software research and development lab. We help companies design, build and grow real products — from the very first idea all the way to millions of users.

10 How we work with you 14

11 The people behind it 16

12 Let's talk 19

A lab,
not just an agency

Most software companies build exactly what you ask for and then move on. We start by asking *why*. We study the problem, test the idea on real people, and only then start building.

The result is software that solves the real problem — not just the first version of it you described. It also means fewer expensive surprises later.

We started in 2024 in Pakistan. Since then we have delivered projects for startups, growing brands and established businesses across the UK, Pakistan and beyond — and built seven products of our own along the way.

2024
Founded

Engineers, designers & researchers

11+
Client projects delivered

7
Products we own and run

WHAT WE'RE GOOD AT

- Web & Mobile Apps
- Artificial Intelligence
- Machine Learning
- Online Stores
- Internal Business Tools
- Cloud & Infrastructure
- Design Systems
- Applied Research

Four things we do that most teams skip

01 Built around real people

We design around how people actually behave, not how we wish they would. Fewer clicks, less confusion, and more people finishing what they came to do.

02 Ready to grow

We build for the size you're heading toward, not just the size you are today. When your business grows, your software grows with it — no costly rebuild.

03 Fast on purpose

Slow software loses customers. We measure and tune every page, image and database query so that everything feels instant to the person using it.

04 Backed by research

Before we write a single line of code we study the problem, test the idea and check the numbers. Guessing is the most expensive thing you can do.

> Every technical decision is a business decision. Every business decision is backed by evidence. Every system we build is made to keep evolving.

What our work has added up to

$2.4M

Capital raised

Funding our clients secured after launching what we built for them.

1.2M+

People served

Real users on the platforms we have designed and shipped.

99.9%

Uptime

Average availability of the live systems we run. It stays on.

40%

Faster

Typical speed improvement when we take over an existing system.

Money in the bank

Investors backed our clients because the product was ready, working and credible.

Systems that hold

Traffic spikes, busy seasons and growth do not take our clients' platforms down.

Teams that improve

We leave clients with better habits, better hires and clearer ways of working.

Six ways we help, in plain English

You do not need to know the technical words. Here is what each one actually means for your business.

01

Brand building & launch

Your name, your look, your message, and a proper plan for launch day. Everything people see, remember and repeat about your business.

- Naming, logo & visual identity
- Positioning & messaging
- Rebrand without losing customers

02

AI solutions

Assistants and automations that take repetitive work off your team's plate and answer your customers straight away, day or night.

- Support & sales chatbots
- Automating routine admin
- AI trained on your own data

03

Build your first version

Got an idea? We build a working first version quickly, put it in front of real users, and help you learn what to do next — before you spend big.

- Fast, testable prototypes
- Real user testing
- Built right from day one

And once you are up and running

04

Custom development

Websites, web apps and mobile apps built around how your business actually runs — instead of squeezing your business into someone else's template.

- Web applications
- iPhone & Android apps
- Live, real-time features

05

Online stores

Shops that load fast, take payments safely, keep stock accurate, and show you clearly what is selling and what is not.

- Secure payment setup
- Stock & order management
- Sales tracking you understand

06

Systems for your team

Dashboards, admin panels and internal tools that replace the tangle of spreadsheets and WhatsApp messages your team is currently drowning in.

- Custom dashboards
- Customer & order records
- Connecting the tools you use

Not sure which one you need? That is normal. Most people start with a conversation, and we work it out together — no charge, no obligation. hello@skordlabs.com

AI that does real, useful work

No buzzwords. AI is only worth building when it saves your team hours or wins you customers.

Assistants & chatbots

Answer customer questions instantly, at 2am, without hiring a night shift.

Automating busywork

Onboarding, approvals, reports and follow-ups that run themselves.

AI trained on your data

A model that knows your products, your policies and your customers.

Smarter decisions

Forecasts and dashboards that turn your numbers into a clear next step.

Social media engines

Content created, scheduled and improved automatically, week after week.

Seeing & predicting

Image recognition for quality checks, monitoring and early warnings.

90%	10×	95%+	$200K
of routine work automated	faster processing	accuracy achieved	saved per year

Different clients, different starting points

Startups & founders

You have the idea and the drive, but not the engineering team yet. We become that team — building your first real version, getting it in front of users, and helping you put together something investors take seriously.

First version | Investor-ready | Move fast

Agencies

You have won the work but not the capacity to deliver it. We work quietly behind your brand as your engineering partner — your client never has to know, and the quality stays on your name.

White-label | Extra capacity | On deadline

Established businesses

Your systems work, but they are old, slow or held together by hand. We modernise them carefully — without stopping your operations or losing years of data.

Modernisation | Security | Zero downtime

Teams who need advice

Sometimes you do not need us to build anything. You need an honest second opinion on a plan, a budget, a hire or a vendor. We do that too, as straight talk rather than a sales pitch.

Technical advice | Hiring help | Reviews

We have already learned the rules in these five worlds

Every industry has its own regulations, habits and traps. Working with a team that has been there before saves you months.

Finance & banking

Payments, lending and wallets built to the security and compliance standards regulators expect.

Healthcare

Patient records, bookings and clinical tools that keep private data genuinely private.

Retail & e-commerce

Storefronts, stock, delivery and returns — the full journey from browse to doorstep.

Property

Listings, viewings, tenant management and the paperwork that comes with all of it.

Education

Courses, student progress and assessment tools that teachers and learners both like using.

We learn your rules first

Before building, we understand the regulations and standards your sector runs on.

Security is not an add-on

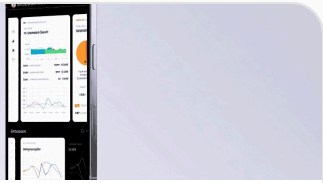

Data protection is designed in from the start, not bolted on before launch.

You own everything

The code, the data and the accounts are yours. No lock-in, no hostages.

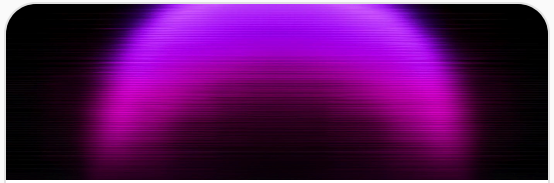

Built by us, ready for you

Seven products of our own, live and in use — proof that we run what we recommend.

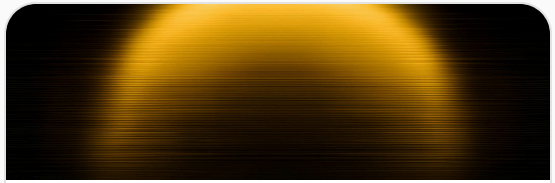

CastAIPro Beta

Turn your videos into any character, with a matching voice — create without showing your face.

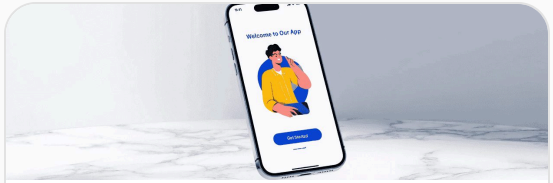

RedByOne Live

Connects blood donors with people in emergency need, in real time, with hospitals in the loop.

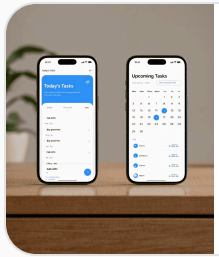

ConfiguraX Live

Lets businesses build and manage product options visually, at enterprise scale.

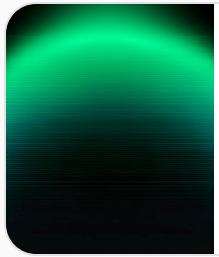

EazStart Live

A complete operating system for new startups — plan, track and report in one place.

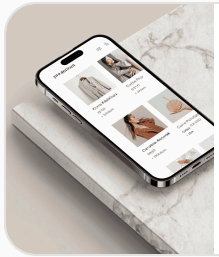

FlowBoard Live

Team task boards for organising projects and working together in real time.

cureOS Beta

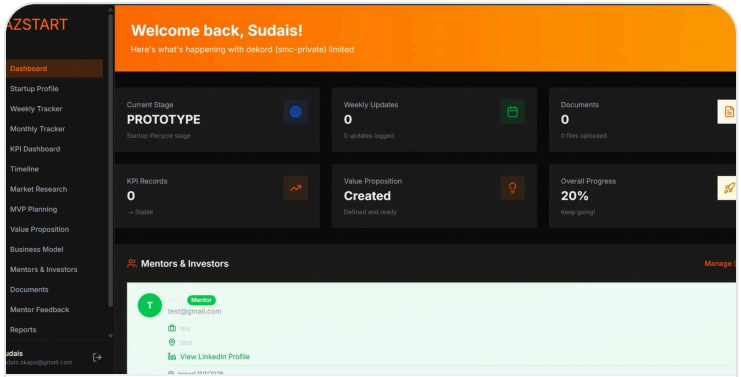

Clean, private replacements for the Gallery, Dialer and Contacts apps on Android.

BillingPro Live

Professional invoices and GST compliance, made simple for Pakistani businesses.

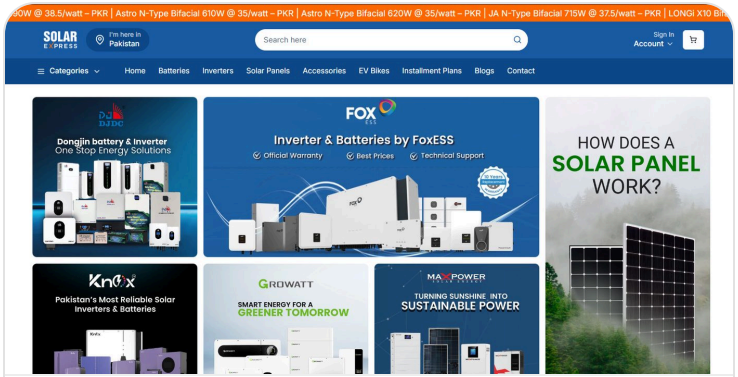

Real projects, real businesses

SAAS PRODUCT

Eazstart

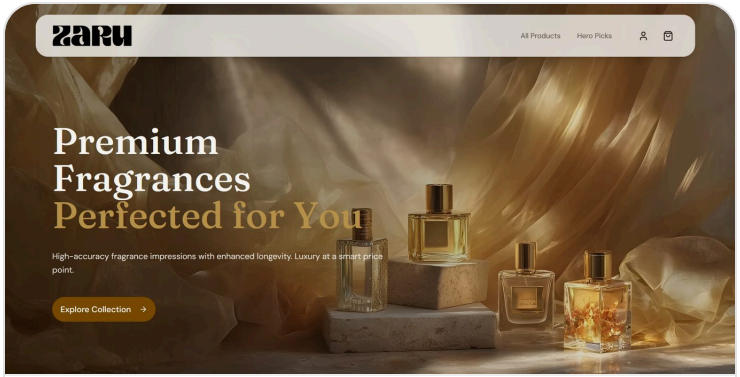

A single platform where startup founders plan the business, track their numbers and produce reports for investors — replacing five separate tools.

COMMERCE & OPERATIONS

Solar Express

A full online store plus the systems behind it — stock, orders and staff tools — for one of Pakistan's solar energy suppliers.

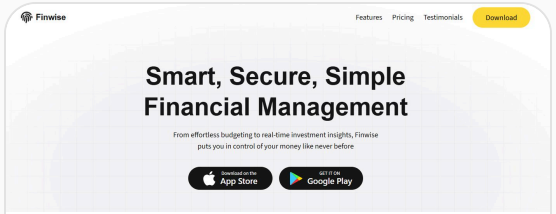

BRAND & COMMERCE

ZARU

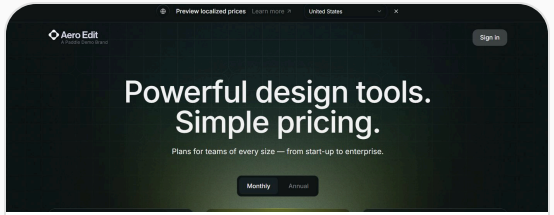

Brand identity and a fragrance store built together, so the way it looks and the way it sells were designed as one thing.

Eight more we are proud of

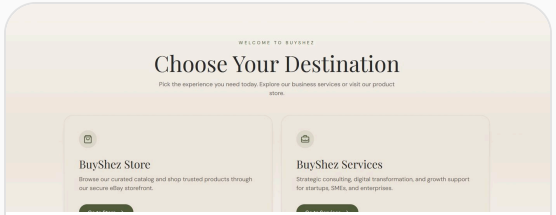

Finwise

A personal finance app that helps people see, plan and control their money.

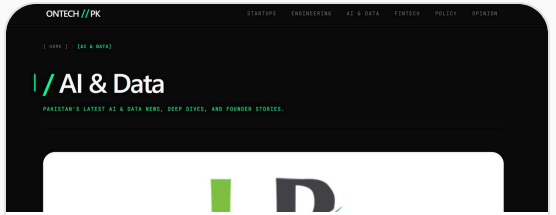

Paddle Billing

A pricing and checkout experience built to turn visitors into paying subscribers.

BuyShez

A UK retailer moved online properly, with advice on how to run it day to day.

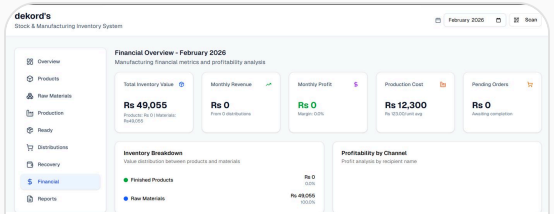

ONTECH//PK

A technology news platform built for fast publishing and heavy reader traffic.

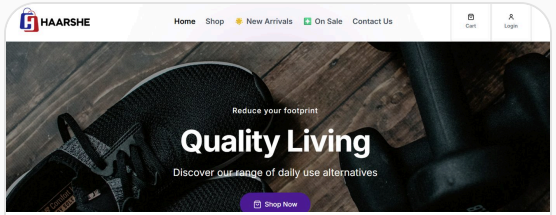

Dekord

Brand and online store built from scratch for a home décor business.

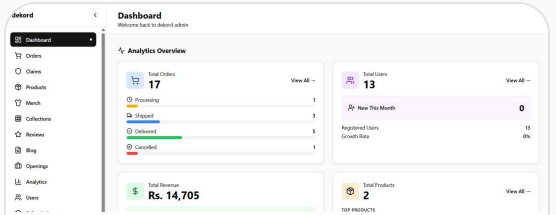

Dekord Operations

Factory and stock software that tracks production from raw material to finished order.

Haarshe

A store connected to social selling, so one team runs both without double work.

Universal Admin

One control panel that manages several online stores from a single screen.

Five steps, and you always know which one we are on

No mystery, no disappearing for three months. You see progress every week and can change direction any time.

01	**Understand the problem** We sit with you and map what the business needs, what your customers do today, and what success will actually look like in numbers.	1–2 weeks
02	**Plan and design it** You get a clear plan: what gets built, in what order, by when, and for how much. Nothing starts until you are happy with it.	1–2 weeks
03	**Build and check** We build in short cycles and show you working software regularly. Everything is tested before it reaches your customers.	4–12 weeks
04	**Set your team up** We train your people, write things down properly, and help you hire well — so you are never dependent on us to keep going.	Alongside
05	**Launch, then keep improving** Going live is the start, not the finish. We watch how it performs, fix what needs fixing, and keep making it better.	Ongoing

We also help you build the team

Good software with the wrong team falls apart within a year. So we help with the people side too — finding the right engineers, training the ones you have, and setting up a way of working that holds up when we are gone.

Finding real talent

We help you write the job spec, screen candidates properly, and tell the difference between someone who talks well and someone who can build.

Training your team

Mentoring, code reviews and hands-on guidance that lifts the engineers you already have instead of replacing them.

A way of working

Simple, repeatable routines for planning, shipping and reviewing — so delivery stops depending on one heroic person.

Honest advice

A second opinion on your roadmap, your budget or a vendor's quote — told straight, even when it is not what you hoped to hear.

Beyond shipping products

We support hiring strategy, team mentorship, delivery frameworks and leadership coaching — so your people and your platform can grow at the same pace.

Talk to our team →

Meet the team

Engineers, designers and researchers with deep experience across software, machine learning and applied research.

Sudais Khan
Founder & Backend Engineer

Aisha Iftikhar
Lead Python Developer

Omer Jauhar
Lead ML Engineer

Ammar Raza
Lead Quality Assurance

Mubeen Ali Shah
Lead Design Engineer

10+
more engineers & designers

The wider team
Across build, QA & research

One team, start to finish

The people you meet at the start are the people who build it. No handing you over to juniors.

You talk to engineers

Not account managers relaying messages. Straight answers from the people doing the work.

Research in the DNA

Published work in machine learning and applied research sits behind the products we ship.

“The best way to predict the future is to invent it. We are building the tools and systems that will define the next generation of digital experiences — and we would like to build yours with you.”

Sudais Khan
Founder & CEO, Skord Labs

In their words

Jahandad Adam
CEO, TechVision Inc.

"Skord Labs transformed our business with their software. The team's expertise and dedication went well beyond what we expected."

Sohail Khan
CTO, Awez Corp

"Working with Skord Labs was a turning point for our company. Their attention to detail is genuinely rare in this industry."

Maria Rodriguez
Project Manager, GlobalTech

"They delivered a complicated project on time and on budget. Communication was clear from start to finish."

Adnan Khan
CEO, Solar Express

"Their research-led approach kept us ahead of our competition. They are genuine partners in our success, not a supplier."

12 — LET'S TALK

Tell us what you are trying to build

Whether you have a full plan or just a rough idea, the first conversation is free and there is no obligation. We will tell you honestly whether we are the right people for it — and if we are not, we will point you to who is.
